

Quick Create Fields with Advantage Acre® Scouting App

The Scouting App offers the user a fast way to add new fields to existing Advantage Acre accounts while in the field, and allows the user to add a Scouting Trip to that new field at the same time the user creates the field.

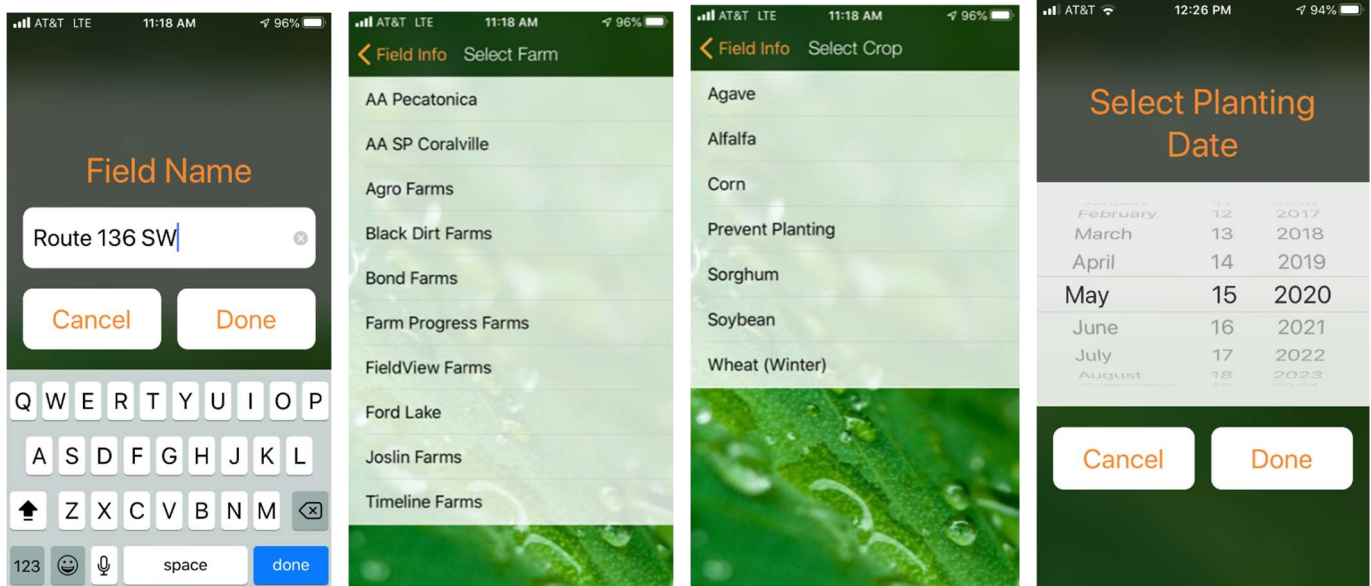

1. Tap on the **Scouting App icon**.
2. The Scouting App opens to the Map view main page. Tap on **List** at the bottom center of screen. Tap on **+ Add a field in the account** you wish to add the new field. The Field Info Menu, with five editable information categories is now displayed.

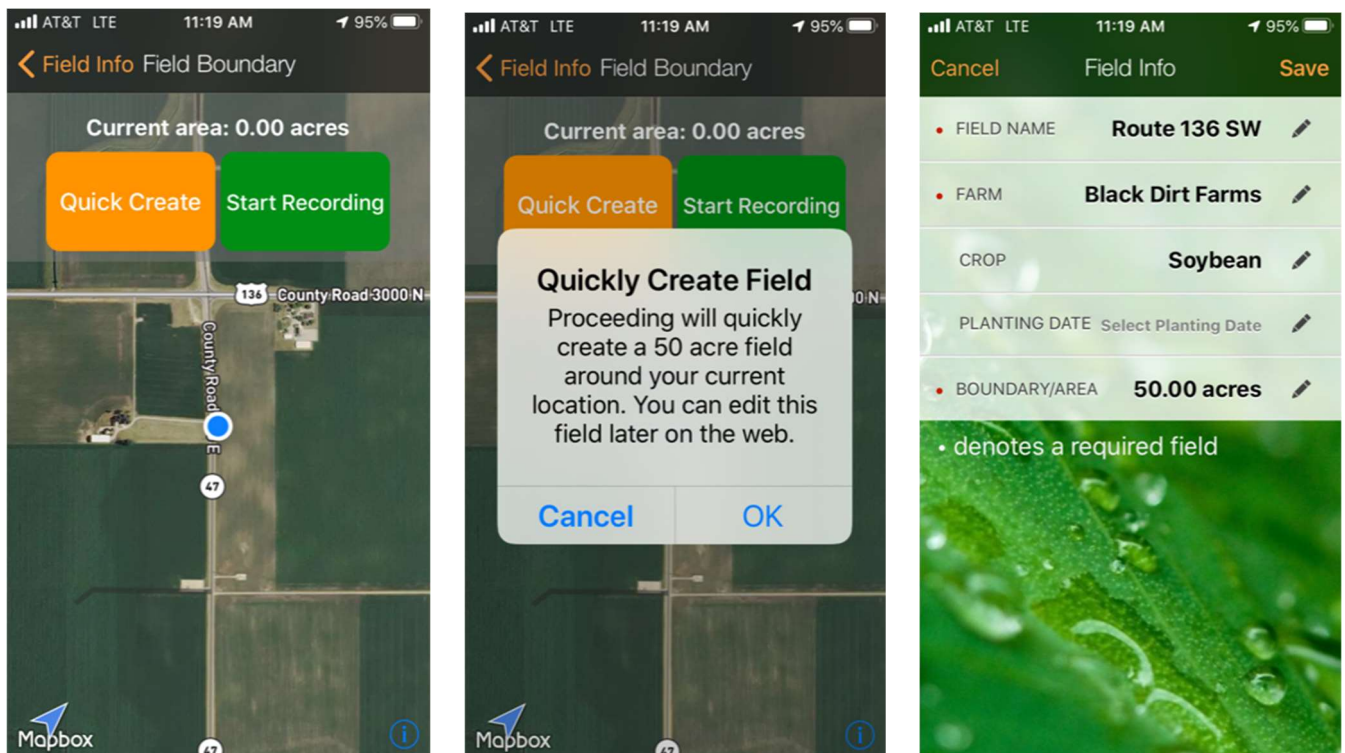

3. Field Name, Farm, and Boundary/Area are **required** to Add a field. Crop and Planting Date are optional. Tap on each **edit pencil** on the right side of each field info line to edit record. **Edit Boundary/Area** last.

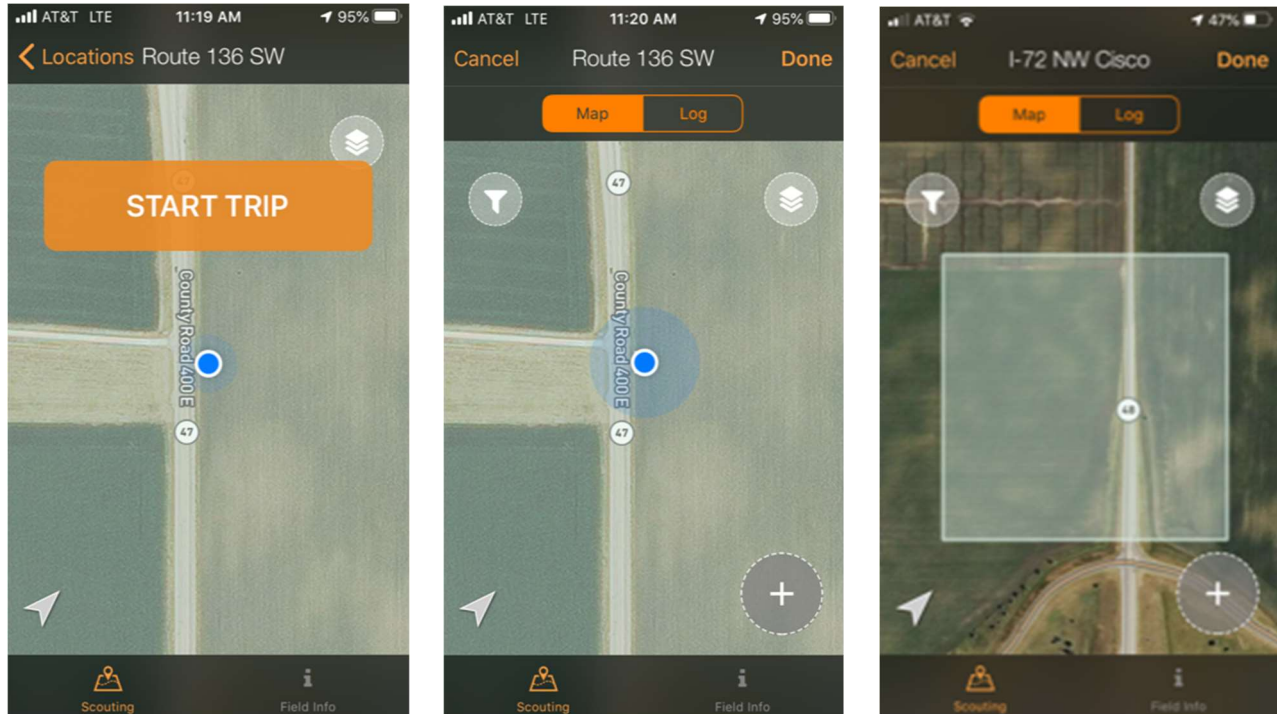

4. Enter Field Name then **tap Done**. Select Farm and Crop by **tapping** on desired **info line**. Select Planting Date and **tap Done**. Each entry takes user back Field Info menu. Each time the user must **tap** on an **edit pencil** to add field information.

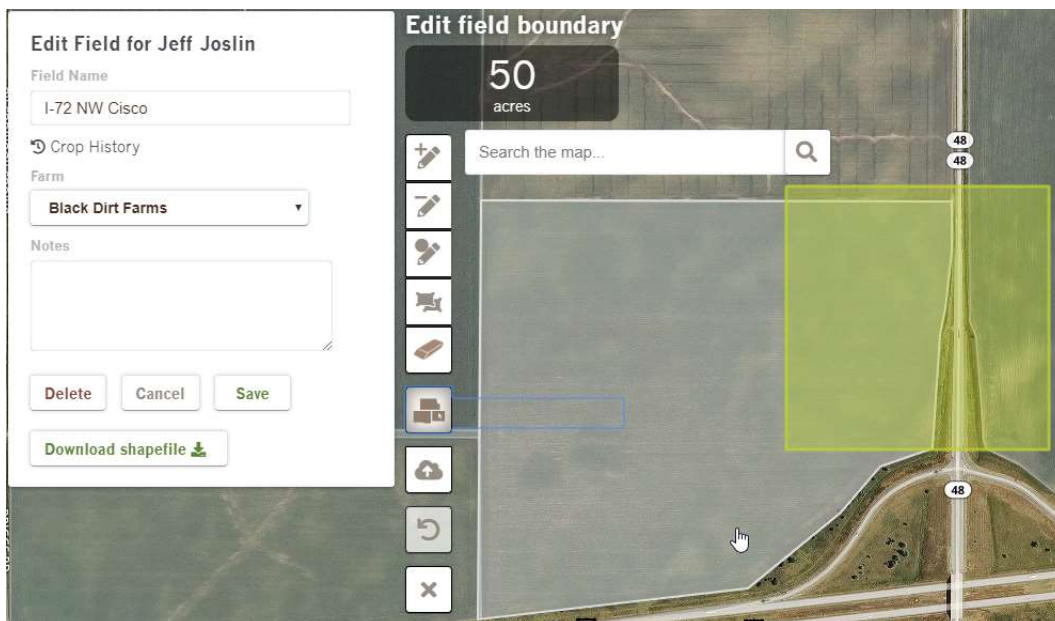

5. After **tapping** on **Boundary/Area edit pencil**, Field Boundary screen with Quick Create and Start Recording buttons appears. **Tap** on **Quick Create** button to select 50 acre field around device, **tap OK**, and then **tap** on **Save** In top right corner to save new Field.

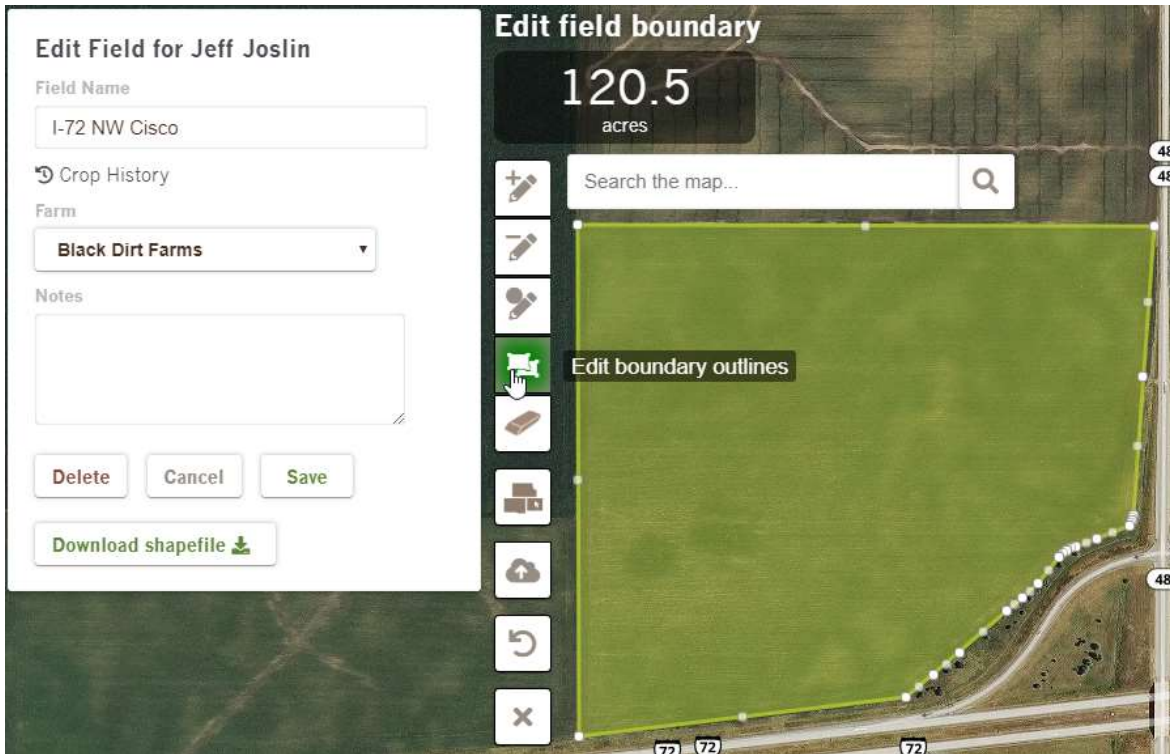

- Start Trip screen appears immediately, and by **tapping START TRIP** a new scouting trip is started. **Zooming** out will reveal the 50 acre field boundary, and if the device is near the edge of the field, the boundary will likely overlap into neighboring field. All scouting notes, inside or outside of this boundary, will be saved when trip is finished.

- Go to the **Advantage Acre** website to **edit** this field boundary. **Select field** and **click** on field's **edit pencil**. (See *Creating and Editing Field Boundaries How-To*) The **CLU** has been **selected** to show actual field boundary. (**6th Edit Tile from top**)

- Click on **Edit Boundary Outlines**. Drag and add dots to match CLU boundary. Click **Save**.

- Click on **Field Records**, then click on **Scouting Activity arrow** to open Scouting Notes recorded right after field was created with Quick Create. New notes may be added.
